System Analysis & Design

Tutorial 01

Agenda

WIUT

- What is System Analysis & Design (SAD)?
- Why do we need System Analysis & Design?
- Group discussion

WESTMINSTER
International University in Tashkent

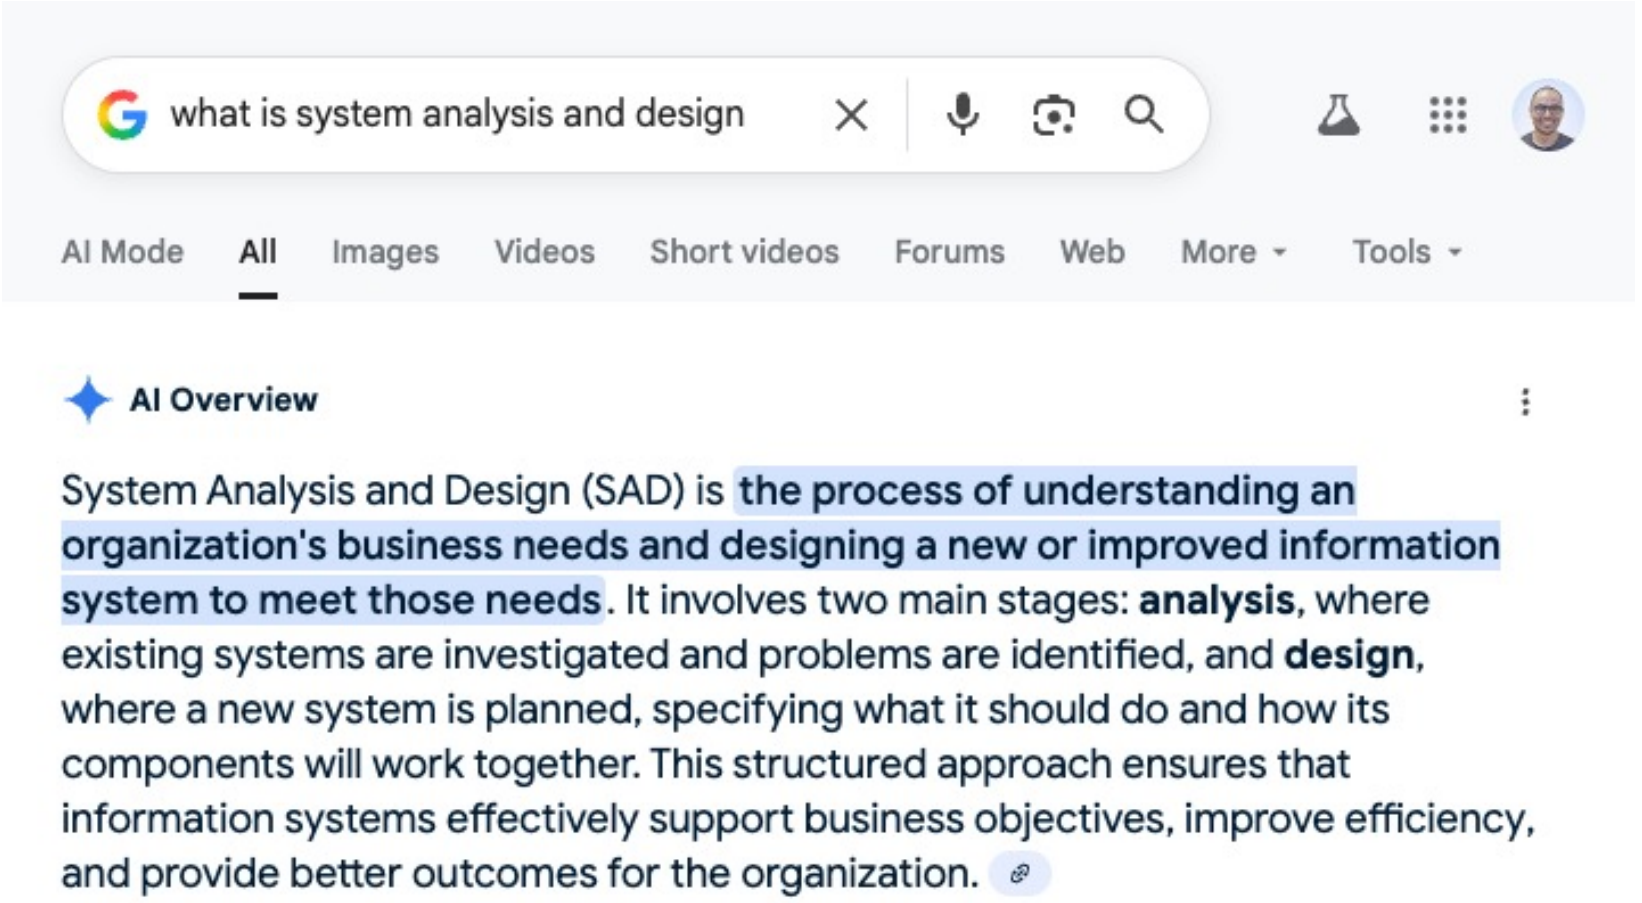

An Accredited Institution of
the University of Westminster (UK)

What is SAD?

Let’s hear your opinion and ideas.

Let’s ask Google

WIUT

What is System Analysis & Design?

System Analysis

- Investigate current system
- Identify issues
- Document the findings

System Design

- Propose/plan a solution
- Explain how the components will work

Sounds simple, but… it’s not!

- Research consistently shows high IT project failure rates. On average ¾ of all IT projects fail.

What are the causes of failure?

The project failure means:

- It wasn’t finished at all.
- It wasn’t finished on time.
- It was over the budget.
- It didn’t have all the features.

Discuss and list 10 potential reason. There is no right or wrong.

Some failure examples:

- **Apple Copland OS:** In 90's, Apple tried to build its own OS. The feature list developers wanted was constantly growing. They failed to produce it. They purchased NeXT, which was the base of MacOS today.
- **Sainsbury's warehouse automation:** Following Tesco's automation success, Sainsbury's tried to automate their warehouse using barcodes to streamline their operations and increase the efficiency. It was a fiasco. Their scanners didn't read the barcodes. After 2 years, Sainsbury's scraped the system and declared £150 million IT loss.
- **FBI Virtual Case File:** The FBI's Virtual Case File (VCF) project was a major failure, costing $170 million and leading to the termination of the project without a usable system.

What are the causes of failure?

- **Unclear goals and objectives:** We don't know what we are building.
- **Scope creep:** Ever expanding scope.
- **Poor project management:** Example, didn't do feasibility study. Developers are slow.
- **No stakeholder engagement:** We build whatever we want, not what you need.
- **Resistance to change:** People are afraid they will be replaced and will sabotage the project.
- **Poor planning:** Example, inadequate resources (e.g. budget).
- etc.

So, the question is:

Would you buy a product that has only 1 in 4 chance of working without a problem?

Example: Your phone, computer, car, etc.

Why study SAD?

That’s exactly why! ☺

To make sure we are the 1 in 4 IT projects that does NOT fail.

Why study SAD?

- We will learn about common problems & how to address them.
- We will learn methodologies, frameworks and available tools.
- We will learn how to do effective IT project management.
- We will learn industry standard communication methods.
- We will NOT learn graphic design, Photoshop for example ☺

System Analyst

A **systems analyst** studies the problems and needs of an organization to determine how people, data, processes, communications, and information technology can best accomplish improvements for the business. When information technology is used, the analyst is responsible for:

- Efficient capture of data from business source
- Flow of data to the computer
- Processing and storage of data by computer
- Flow of useful and timely information back to the business and its people

System Analyst Responsibilities

- Mediator or a bridge between business and “IT”
- Social investigation
- Understand and interpret business needs
- System design
- Communicating with clients, users, technical people
- Sometimes Analyst is a Developer

System Analysts in Uzbekistan

WIUT

IT market

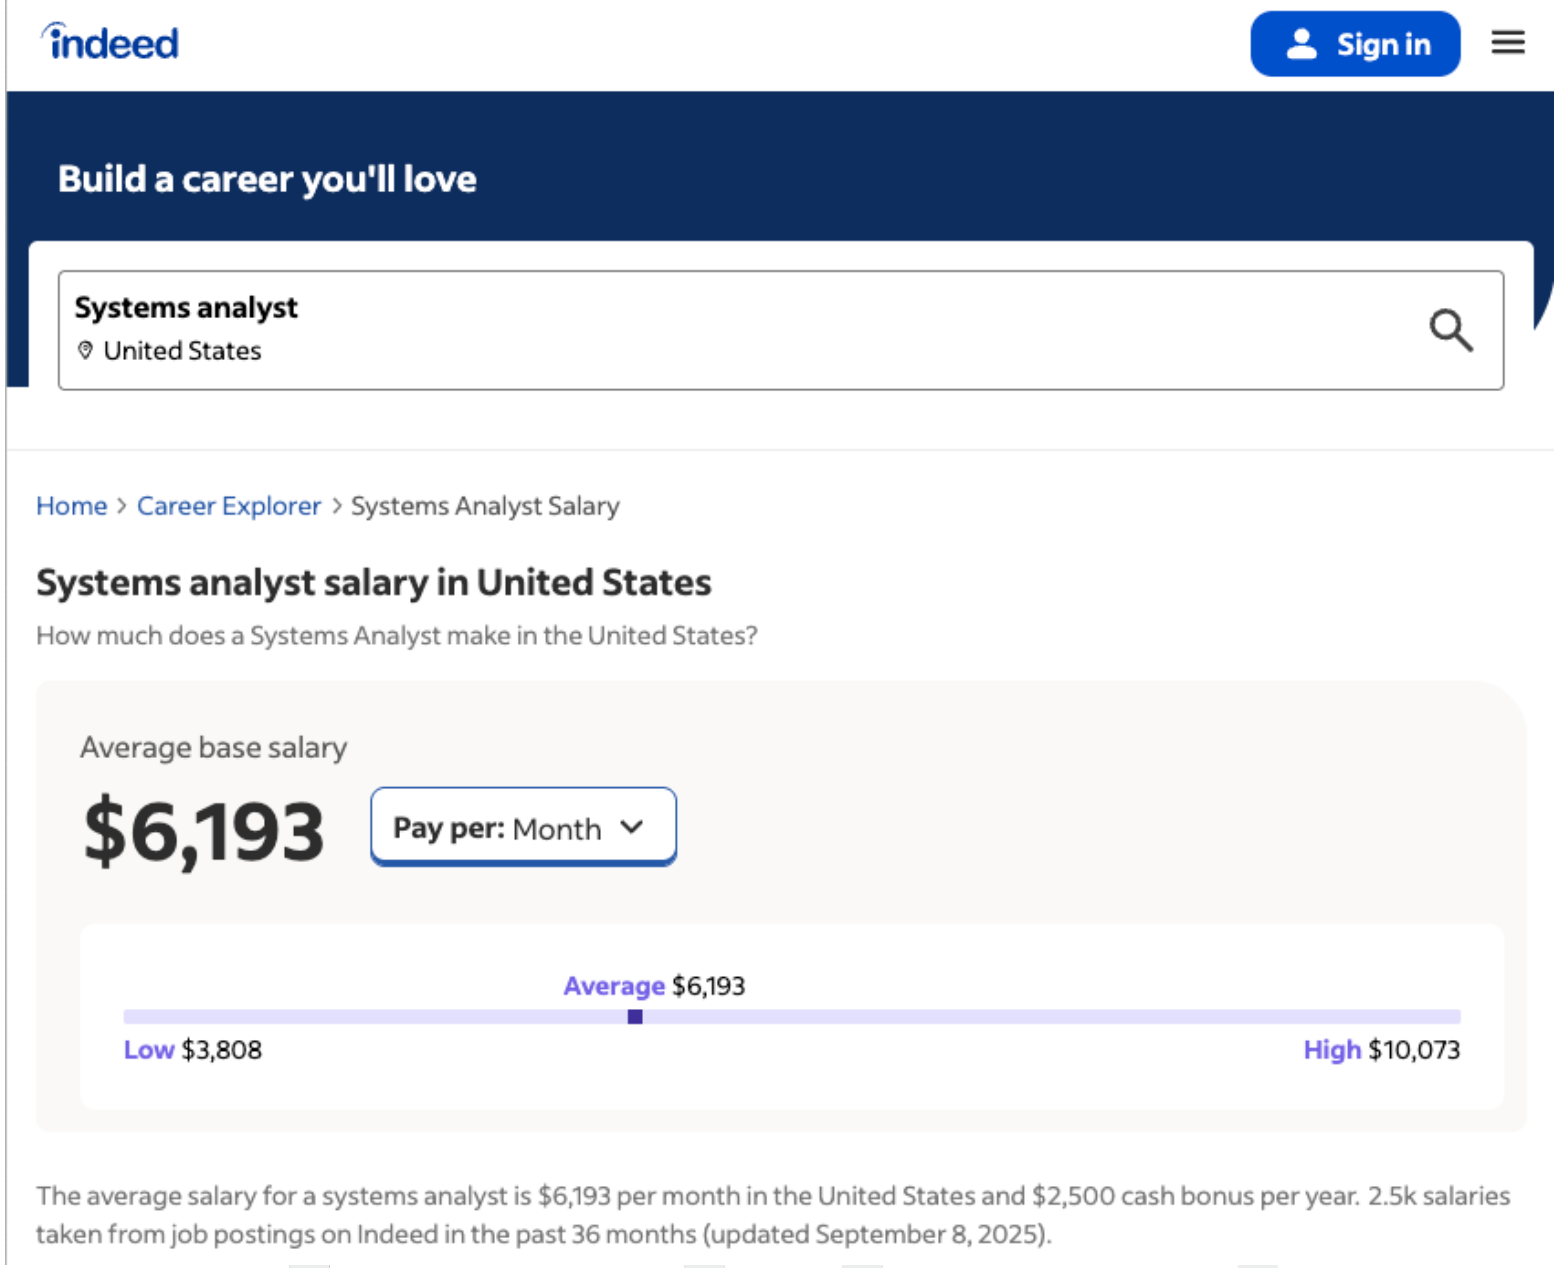

- Local
- International

High rate of project failure

- User requirements not understood
- Rejected by client/user
- High cost of maintenance/changes
- Over time
- Over budget
- No business benefit

Salaries and duties

- Start $500 for part-time
- Task management

Systems analyst salary in United States
How much does a Systems Analyst make in the United States?
Average base salary
$6,193
Pay per: Month
Average $6,193
Low $3,808
High $10,073
The average salary for a systems analyst is $6,193 per month in the United States and $2,500 cash bonus per year. 2.5k salaries taken from job postings on Indeed in the past 36 months (updated September 8, 2025).

The End

See you at the lecture.
